Sri Lanka Institute of Information Technology

Consider the following XML document that contains information on a XML file

```
<?xml version="1.0" encoding="UTF-8"?>
<books>
 <book category="JAVA">
   <title lang="en">Learn Java in 24 Hours</title>
   <author>Robert</author>
   <year>2005</year>
   <price>30.00</price>
 </book>
 <book category="DOTNET">
   <title lang="en">Learn .Net in 24 hours</title>
   <author>Peter</author>
   <year>2011</year>
   <price>40.50</price>
 </book>
 <book category="XML">
   <title lang="en">Learn XQuery in 24 hours</title>
   <author>Robert</author>
   <author>Peter</author>
   <year>2013</year>
   <price>50.00</price>
  </book>
 <book category="XML">
   <title lang="en">Learn XPath in 24 hours</title>
   <author>Jay Ban</author>
   <year>2010</year>
   <price>16.50</price>
  </book>
</books>
```

Note that the above XML document stored in Books(xText XML) table creatingle record.

ag question

Consider the following statements about transactions.

A - DBMS logs all actions so that it can undo the actions of aborted transactions.

1

- B DBMS are mainly responsible for ensuring transaction consistency.
- C A committed transaction is always reflected in the database.

Select the correct statements

Select one:

- a. Conly
- b. B only
- C. A and C only
- d. A and B only
- e. A only

ag question

Select incorrect statement/s about simple tree locking algorithm

Select one or more:

- a. In delete / insert processes, If child node is safe release all locks on ancestors.
- b. Searching data start from root and go down repeatedly, while holding S lock on child, then unlock parent
- c. Once child is locked by X lock, check if it is safe before release the locks.
- d. If node is full; it is safe to insert data and if node is half-full; it is safe to delete data.
- e. To delete data in nodes traverse the tree from bottom to up, while obtaining X locks as needed.

Flag question

Select correct statement/s about handling deadlocks in database systems.

Select one or more:

- a. To detect deadlock, Periodically check for cycles in the waits-for graph
- b. In deadlock prevention, priorities are assigned to transactions based on timestamps
- c. Wait-Die and Wait-wound are the two deadlock prevention mechanisms.
- d. When deadlock occurs, victim is the transaction which is going to wait.
- e. In wait -die, if the transaction that requires the property holds by other transaction have high priority, it will wait and die.
